                                  inserted into, or replacing all or a portion, of a SPV gene or nucleic acid sequence. The replaced gene or nucleic acid sequence is not essential to replication of the virus in a host cell, and is selected from a gene or nucleic acid sequence present in the HindIII C fragment. The vector can be used for the expression of heterologous proteins, both in vivo as a vaccine, and in vitro for production of the selected protein. The heterologous protein is proferrably pseudorables virus gp50 or gp63 for use in swine vaccines. As SPV is host-restricted to swine, the use of modified recombinant SPV as a live vaccine vector eliminates the risk of
                                                                                                                                                         This double-stranded DNA sequence, both strands of which are claimed, comprises the HindIII C fragment of swinepox virus (SPV). The sense strand includes putative coding regions for 6 polypeptides (AAW26408-13) and the antisense strand includes putative coding regions for 21 polypeptides (AAW26414-34). A claimed recombinant vector comprises a heterologous not expense expenses that the comprises a heterologous not polypeptide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDS

                                                      The present sequence represents a HindIII C fragment of Swinepox virus (SPV). The polynucleotide fragment was used to construct a recombinant vector. The vector comprises a heterologous nucleotide sequence encoding a protein from a selected pathogen inserted into, or replacing, all or a portion of a swinepox virus gene, which is not essential to replication of the virus in a host cell. The SPV vector is useful in diagnostic, therapeutic or prophylactic compositions. In particular, the vector is useful as a vaccine or a therapy against a selected pathogen, particularly against pseudorables. The vector is also useful in therapeutic or vaccine compositions against TGEV (undefined), African swine fever virus, porcine parvovirus, swine influenza, hoy cholera or other bacterial mathogen.
                                                                                                                                                                                                                                                                                                                           14-SEP-1994;

The polynucleotide fragment was used to construct a recombinant vector. The vector comprises a heterologous nucleotide sequence encoding a protein from a selected pathogen inserted into, or replacing, all or a portion of a swinepox virus gene, which is not essential to replacation of the virus in a host cell. The SPV vector is useful in diagnostic, therapeutic or prophylactic compositions. In particular, the vector is useful as a vaccine or a therapeutic or prophylactic compositions. In particular, the vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine or a therapeutic vector is useful as a vaccine vector is useful as vaccine vector is useful as a vaccine vector is useful as vaccine vector is useful a

Sequences of the invention are useful for treating immunomodulatory disorders such as cancers, tumours, inflammation, allergic reactions, transplant rejection, restenosis, antibody complex mediated diseases, autoimmune complications of AIDS (acquired immune deficiency syndrome), psoriasis, Behcet's syndrome, acute respiratory districts syndrome (ARDS), ischaemic heart disease, type I insulin-dependent diabetes mellitus, Addison's disease, atherosclerosis or leukemia. They are also used in gene therapy. The present sequence is Yaba monkey tumor virus (YMTV)
                                                                                                                                                                             Human polynucleotide associated with DNA replication
                                                                                                                                                                                                              01-MAY-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acid sequences comprising at least 18 cd bases of a chemically pretreated gene associated with gene regulation, selected from 94 genes (ABIA9301-ABIA9394) and/or complementary sequences associated with DNA replication, CENPB, DNA21, ATR, CHDIL, ERCC3, SNRPA1, RAD50 and LIG2. The chemical pretreatment converts cytosine bases cummethylated at the 5-position to uracil or another base with hybridisation behaviour dissimilar to cytosine, to enable analysis of cytosine methylations. The DNA sequences and method are useful in the CC diagnosis of diseases (or predisposition to diseases) associated with DNA replication and in therapy of such diseases, by enabling analysis of the cytosine methylation patterns of such genes. They are especially useful in diagnosis and therapy of e.g. Ataxia telangiectasia, ATR-X, Bloom's cytosine methylation patterns of such genes. They are especially useful in diagnosis and therapy of e.g. Ataxia telangiectasia, ATR-X, Bloom's cytosine methylation and cancer.

CC syndrome, solid tumours and cancer.

CC vote: The sequence data for this patent did not form part of the printed cytosine, solid tumours and cancer.

CC vote: The sequence data for this patent did not form wife of the printed cytosine produced to that referred to in the specification. The present data
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-APR-2000;

                                                                                                                                                                                      The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, ADDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antiarteriosclerotic; antianaemic; cytostatic; nootropic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                           signalling, as well as oligonucleotides and/or pNA-oligoners for detecting cytosine methylations, as well as a method which is particularly suitable for the diagnosis and/or therapy of generic and epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as solid tumours and cancer. The sequences given in records ABL70111-ABL70626 represent chemically pre-treated genomic DNA's of genes associated with cell signalling.

Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the
                                                                                                                                                                                                                                     The invention relates to a nucleic acid comprising a sequence of at least 18 bases of a segment of chemically pretreated DNA of genes associated with cell signalling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell
                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid, useful for diagnosis and therapy of diseases associated with cell signalling e.g. cancer, comprises chemically modified genomic sequences of genes associated with cell signalling -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
Is bases of a chemically pretreated gene associated with gene regulal selected from 43 known genes (or complementary sequences). The chemical pretreatment converts cytosine bases unmethylated at the 5-position to uracil or another base with hybridisation behaviour dissimilar to cytosine, to enable analysis of cytosine methylations. The DNA sequences, oligomers (or sets/arrays) and method are useful in the diagnosis of diseases (or predisposition to diseases) associated with gene regulation and in therapy of such diseases, by enabling analysis of the cytosine methylation patterns of such genes kits are provided. They are especially useful in diagnosis and therapy of e.g. severe combined immunodeficiency disease, cardia disorders, haemophilia, solid tumours and cancer, Werner syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  06-APR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.
